Residents located north of Highway 50 (Austin Highway) and east of Highway 95 (Lovelock Highway) but north of the Carson River should proceed: North on Highway 95 (Lovelock Highway)
Evacuation Site: Kennemetal Campground

SHELTER LOCATIONS

The most immediate shelters available within the City of Fallon are City Hall and the County Administrative building. These building have emergency power and can be used immediately as an interim support facility until other facilities can be brought on line. The City Hall is manned 24 hours per day and entrance is gained via the Police entrance on the south side (opposite Williams AV).

The next viable options for mid-term shelter (a few days) are the Fallon Convention Center (near the community college) and the County Multi-Purpose Building (fair grounds). These facilities have kitchens and are capable of receiving power from one of the city's emergency portable generators.

For long term shelter or for larger public requirements, the plan is to use larger facilities, such as local area schools and churches, plus those available through the state and federal government (facilities at NAS Fallon, Lovelock, Reno, Carson City, etc).

FALLON

E.C. Best Elementary School 750 East Williams	Lahontan Elementary 1099 Merton Drive	Northside Elementary 340 Venturacci Place
Numa Elementary 601 Discovery Drive	West End Elementary 280 South Russell	Churchill County Junior High School 650 South Maine Street
St. John's Youth and Family Center 520 Merton Drive	Fallon Convention Center 100 Campus Way	Churchill County High School 1222 South Taylor Street

If an evacuation is needed in your community, you might hear about it during a routine radio or television news broadcast, or through the Emergency Alert System (EAS) which broadcasts critical information on local radio and television stations and local cable providers as well as on NOAA Weather Radios. Where available, officials might use telephone notification systems such as Reverse 911 or community sirens. Sometimes officials will go door-to-door, in which case they will have proper identification so that you will know the evacuation order is accurate.

The City of Fallon has an Emergency Information Line that will be updated with instructions and the latest status of any major incident or disaster. This recording can be reached at 423-2142.

The evacuation order message will be brief and include basic instructions on what to do, and possibly some information about the threat. There may not be enough time for a lot of details so it is important to follow the instructions as quickly as possible and then look for more information from local radio or television stations over battery powered receivers or car radios.

When an evacuation involves a school, school officials will work with the local media to inform parents about when and where to pick up their children. If available, school officials will also use a telephone notification system to inform parents about the evacuation.

When the emergency that led to evacuation order is over, officials will provide information to the local media and to the agencies operating local shelters about the conditions for returning to the area. You may be able to return home without any restrictions but in some cases, there may be damage to roads or other travel problems. Utility services such as electricity or telephone may not be available. In some cases, officials may determine that the damage is so extensive that you can't stay in the area for any length of time. You may have a chance to determine the condition of their property and possibly search for and retrieve belongings. No matter what the situation is, the official instructions for returning to the area are developed to keep you safe.

The EAS Local Primary stations in Nevada are the "entry points" for warning messages about local or regional emergencies. These stations will be the first to broadcast these warnings. All other radio and television stations and cable operators in Nevada participate in the Emergency Alert System although they may not carry all local or regional warnings. You should contact your favorite radio or television station or cable provider and ask them about their level of participation in the Emergency Alert System.

The National Weather Service also carries EAS messages on their NOAA Weather Radio stations in Nevada. If you are considering a weather radio, be sure it has the "Public Alert" function. That means it has a setting that will sound an alarm if an EAS activation has been issued, even if it is turned off. NOAA Weather Radio can be heard in Nevada on 162.400 MHz, 162.425 MHz, 162.450 MHz, 162.475 MHz, 162.500 MHz, 162.525 MHz and 162.550 MHz.

The EAS Local Primary Stations

In an emergency tune to: KKOH 780 AM
 KUNR 88.9 FM and 89.9 FM (Lovelock translator)

Local information will be distributed on local radio stations KVLV 980 AM and KHWG 750 AM
