Emergency Communication guidelines are varied and depend on the situation or incident that occurs. The following procedures may be used to inform the public.

1. Emergency Manager or Public Service Officials may initiate the Emergency Alert System. This system interrupts local radio and television broadcasts with emergency alerts and instructions to the public. Listen to KDWN-FM on your radio or KLAS-TV.
2. First Responders and credentialed volunteers will go door to door alerting citizens of impending hazards.
3. Sheriff patrol vehicles will use their P.A. systems to alert citizens on the street.
4. Retired Senior Volunteers will use the telephone tree system to alert citizens on the telephone of impending hazards.

There are no guarantees that every citizen can be contacted during an emergency, but with these four methods, a large section of our population can be notified.

In an emergency, the electric power may fail at any time. This means that any telephone that relies on electricity to function, will not work. If you have an old fashioned telephone that only connects to the phone with a wire and does not require being plugged to electric power, it will always work.

The EAS Local Primary Stations

In an emergency tune to: KLNR 91.7 FM
